

June 2005 Update

This document describes the fixes and enhancements available with the June 2005 Update. This update is designed to be installed only after you have installed the December 2004 Update – Second Edition.

For any questions or comments regarding this update, please contact AristoCAT support at support@aristocat.com or 800-727-4786.

January 3, 2006

Several Enhancements have been made to the real-time program:

- When audio sync is active, a graph showing the sound level displays at the bottom of the screen. Note that the graph is about 4 seconds behind the actual sound, but it should show if sound is being recorded.
- When the real-time session is active, you can click the Avsync menu item, then click the Avsync Options menu item and see the following two new options:
 1. Automatic Pause in Edit – if this box is checked, then when you switch to the edit screen while in real-time, the Avsync recording will automatically be paused.
 2. Return to Real-time – if this box is checked, then if you are in the edit screen and you start writing on your writer, you will be automatically be switched back to the real-time screen.

Important Note: Be sure to read the Help file to get more detailed information about the options on the AVSync Options dialog box.

December 21, 2005

A maintenance update has been made to the **Proofreading** program and the **File Management** program.

December 7, 2005

- **Dictionary Management Program** – When editing your personal dictionary, you can press the F6 function key to have the program check for possible bad dictionary entries. Bad entries include English definitions that start and or end with space(s) and definitions which contain control characters.
- **File Management Program**
 1. The program has been changed to recognize removable media devices with capacities greater than 2Gb. For example, recordable DVDs and external hard drives.
 2. An option has been added to the Backup menu item. The new menu item is named Restore and will copy the abackup.zip file from the removable media to your user folder on the hard drive and automatically unzip the back up files.
 3. An option has been added to the E-Mail menu item. The new menu item is named E-mail Support Files. If you need to e-mail file(s) for us to look at, you

should use this option. You first select the job(s) you want to e-mail and click on E-Mail Support Files. The files you have selected will be zipped together in a file named esupport.zip and then attached to an e-mail. You then fill in our e-mail address, which is support@aristocat.com. Note: if you are using an e-mail program other than Outlook or Outlook Express (such as AOL) you may have to manually attach the esupport.zip file to an e-mail and send it to us.

4. A change has been made to several of the operations such as Archive, Copy, Erase, Rename, and Zip when you have chosen "Job Files" under "View Files of Type". Several new file types have been added to jobs such as .PDF, .RTF, .AVS, etc and some of the operations did not take into account the new file types. For example, when you erased a job, not all parts of the job (ie: the new file types) would be erased.

October 17, 2005

File Management Program – When unzipping files, the file management program will now warn you if the file already exists in your user folder, show the dates and times of both files and give you the opportunity to replace the file in your user folder or not. Also, when zipping files with the zip option or the e-mail option, the file management program will use the name of the file you are zipping as the default zip name.

June 13, 2005

Dictionary Management – several minor changes to the personal and job dictionary RTF/CRE conversion have been made.

June 6, 2005

- **File Management Program** – With some operating systems, when writing to a CD, you might have gotten a message saying "Invalid Function". This has been fixed. Note that even if you got this message, the program would still write the files to the CD.
- **Print Program** – In some instances, if you print the page number on the footer (rather than the header), the footer would print in a different location on the first page than the rest of the pages. This has been fixed.
- **Read Program** – you now have the ability to read from other locations (folders) than the A: and B: drive. This provides the capability to read from CDs, Flash Cards, etc. Of course you can still read from the A: drive. Support has also been added for the ProCAT Flash PC Card.
